Electric Actuator: Guide Rod Type

LEYG-X245

Features

- Uses a compact guide cylinder (MGPM series) unit
- Improved performance as a stopper

LEYG25-X245
Increased by 3 times
(140 kg ← 45 kg)

LEYG32-X245
Increased by 5 times
(410 kg ← 75 kg)

LEYG40-X245
Increased by 14 times
(1100 kg ← 75 kg)

Operating range when used as a stopper

Size: 25, 32, 40
Stroke: 30, 50 mm*1

*1 Applicable stroke range:
50 mm or less

Application Examples

Best suited for applications where transferred objects are heavy and the transfer speed is fast.

Caution

To ensure the safest possible operation of this product, please be sure to thoroughly read the "Safety Instructions" in our "Best Pneumatics" catalog before use.

How to Order

Caution

1. Workpiece collision in series with the guide cannot be permitted.

2. The manufacturable stroke range is 30 to 300 mm. Please contact SMC for strokes other than 30 and 50. When using as a stopper, select a model with a stroke of 50 mm or less.

3. Make sure that the cylinder mounting surface has a flatness of 0.02 mm or less.

If the flatness of the workpieces and brackets mounted on the plate are not appropriate, sliding resistance may increase. If it is difficult to maintain a flatness of 0.02 mm or less, put a thin shim ring (provided by the customer) between the plate and the workpiece mounting surface to prevent the sliding resistance from increasing.

4. Do not scratch or gouge the sliding portion of the piston rod and the guide rod.

Doing so may cause a malfunction.

5. Do not dent or scratch the mounting surface of the body and the plate.

This may cause a decrease in the flatness of the mounting surface, which will cause an increase in sliding resistance.

6. Do not operate the actuator in a state where lateral loads are applied.

The actuator may not operate due to the friction force generated between the conveyor and the transferred object.

Regarding this product, unless otherwise noted along with a separate contract or agreement within the Product Specifications, the safety instructions specified in the catalog are applied.
